- A - Elastic tube with openings at top and bottom made of elastic material mentioned in specification, with a material thickness if 1 to 2 mm.
- B - Additional 1to 2mm thick compression bands (of same material) through out the circumference of I.V. Sleeve.
- C - Tubular shape ranges in sizes of 15mm in length and 20mm in diameter  
TO  
20mm in length and 80mm in diameter

Figure 1. A diagram illustrating the geometry of a curved surface, showing a cross-section of a dome-like structure. The diagram is labeled with 'A' and 'B' at various points, indicating specific locations or features. The structure is composed of a series of curved lines, with dashed lines indicating internal or hidden boundaries. The overall shape is a curved, bowl-like or dome-like structure, viewed from a perspective that shows its curvature and depth.
